

5 ABSTRACT OF THE DISCLOSURE

10 An electrophotographic endless belt has a beltlike substrate and a meandering-
preventive member attached to the inner peripheral surface of the beltlike substrate via a
pressure-sensitive adhesive, double-coated tape. The pressure-sensitive adhesive, double-
coated tape is a pressure-sensitive adhesive, double-coated tape having i) a reinforcing base
material and ii) pressure-sensitive adhesive layers on both sides of the reinforcing base
material. The reinforcing base material has a thickness of from 25 μm or more to 200 μm or
less, and the pressure-sensitive adhesive layers on both sides each have a thickness of 200 μm
or less and at least one of the pressure-sensitive adhesive layers has a thickness of from more
than 100 μm to 200 μm or less, and the meandering-preventive member has a hardness of
15 from 15° or more to 70° or less. Also disclosed are a process cartridge and an
electrophotographic apparatus which have the electrophotographic endless belt as an
intermediate transfer belt.
